

Activate SERIES

WITH CLIMATE RESISTANCE COATING

Our Activate Series cardio equipment is now available with an advanced pre-treatment option designed to add an extra layer of protection to your investment. This process was designed specifically for facilities that deal with exceptionally high humidity, including coastal regions where salt air is a concern, and rooms that share air with pools and spas. A combination

of e-coating and other breakthrough primers on many of the steel components including frames, uprights, handlebars and rocker arms preserve the good looks of the equipment for years to come. For more information on this option please contact your Life Fitness sales representative.

PERFORMANCE FEATURES

SPECIAL TREATMENT

The surfaces are treated to retain the equipment's appearance for many years.

JUST FOR THE EXTREME

This process is excellent for coastal regions, areas of high humidity and facilities in which air flows between an equipment room and a pool or spa.

CLIMATE RESISTANT COATING OPTION
